

# Do You Have a Propane Generator?

*If so, we have a few tips that can help you get through the next power outage smoothly.*

We take tremendous pride in keeping our automatic delivery customers tanks full, but the reality is, **when you have a propane powered generator there is no such thing as "Automatic delivery."** The unpredictable nature of power outages make it impossible for us to know when your generator is running and how much propane is left in your tank. **To avoid out of route delivery fees and potential run outs we now encourage all of our generator customers to sign up for the Colby & Gale Generator Propane Tank Monitoring Service.**

## How It Works

- (1) Our monitor checks tank level every 60-seconds and sends an alert if your tank level drops below a preset threshold
- (2) Reports and alerts are communicated to our office wirelessly via secure cloud platform
- (3) We view tank readings in our office and we will receive alerts 24/7
- (4) We'll use this data to schedule delivery and ensure you have fuel when you need it the most.
