

"DO's & DON'Ts"

for a Safe Heating Season!

-  Be sure to keep walkways outside your home free from debris and shovel a clear path to your fuel intake.
-  Always keep yourself and objects three feet away from heat sources.
-  Never run a space heater designed for outside use, (such as a patio heater), inside your home.
-  Replace the batteries in carbon monoxide detectors and smoke detectors and check that they are in working order.
-  Never use a cooking stove to heat your home.
-  If you own a second home or vacation property have someone check on it periodically to prevent frozen pipes or other winter damage.
-  In frigid conditions be sure to limit your pet's time outdoors.
